

Library Management System With Digital Archive

Components

- Search and Filtering
- User Management
- Book Management
- QR Code System
- Book Circulation
- Digital Archive

Tools

Visual Studio

VS Code

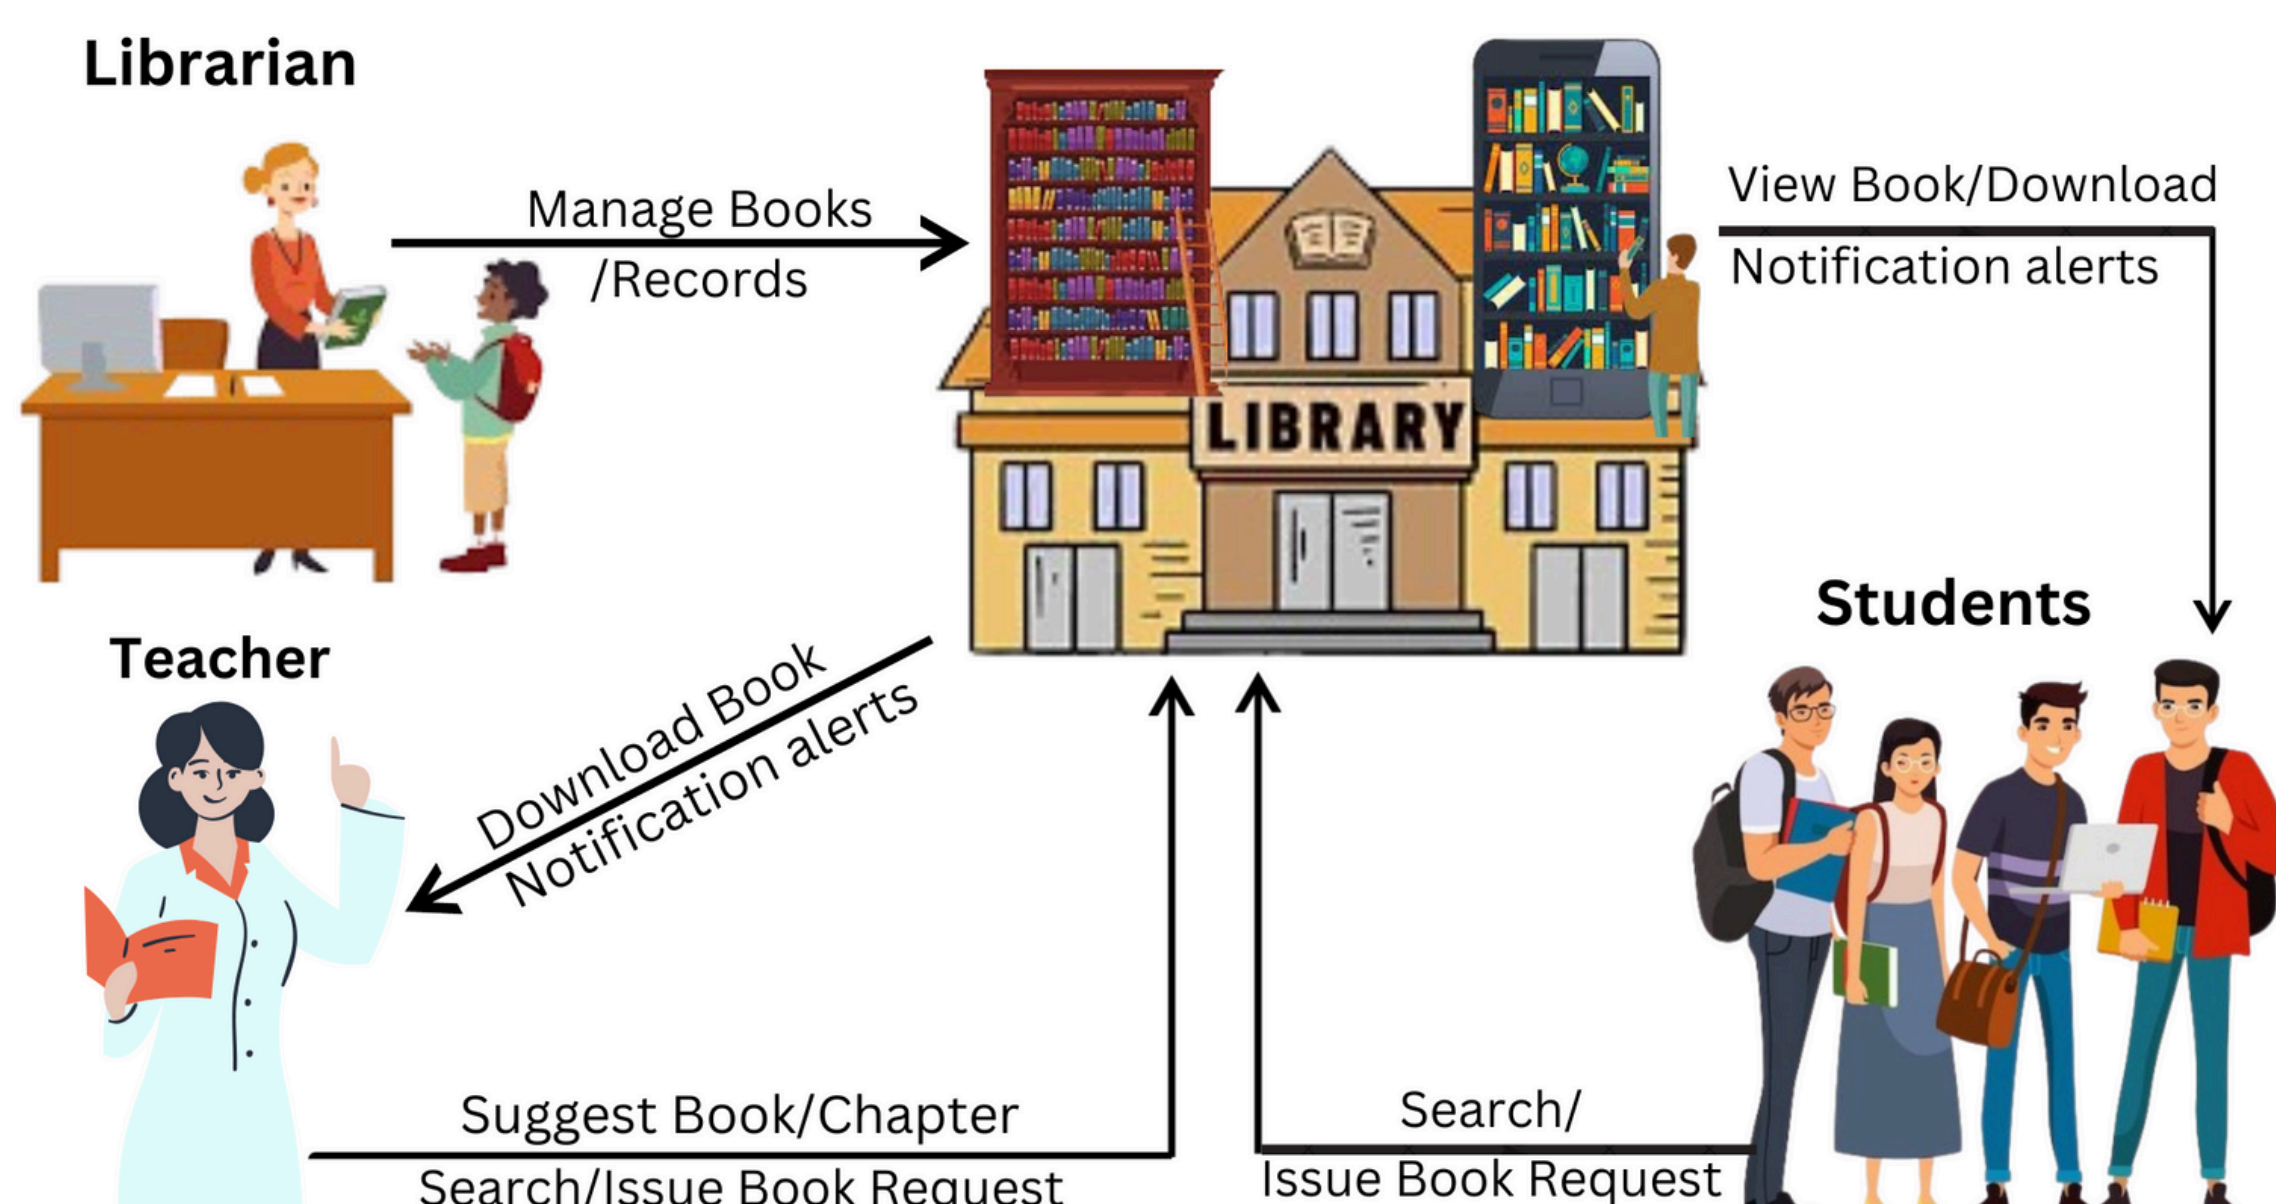

SQL Server

Android Studio

Main Idea

The library management system with digital archive manages both physical and digital resources. It allows users to issue books, access digital content like e-books, lesson plans and track reading progress. The system ensures easy access, quick book management through QR codes and supports personal bookshelves.

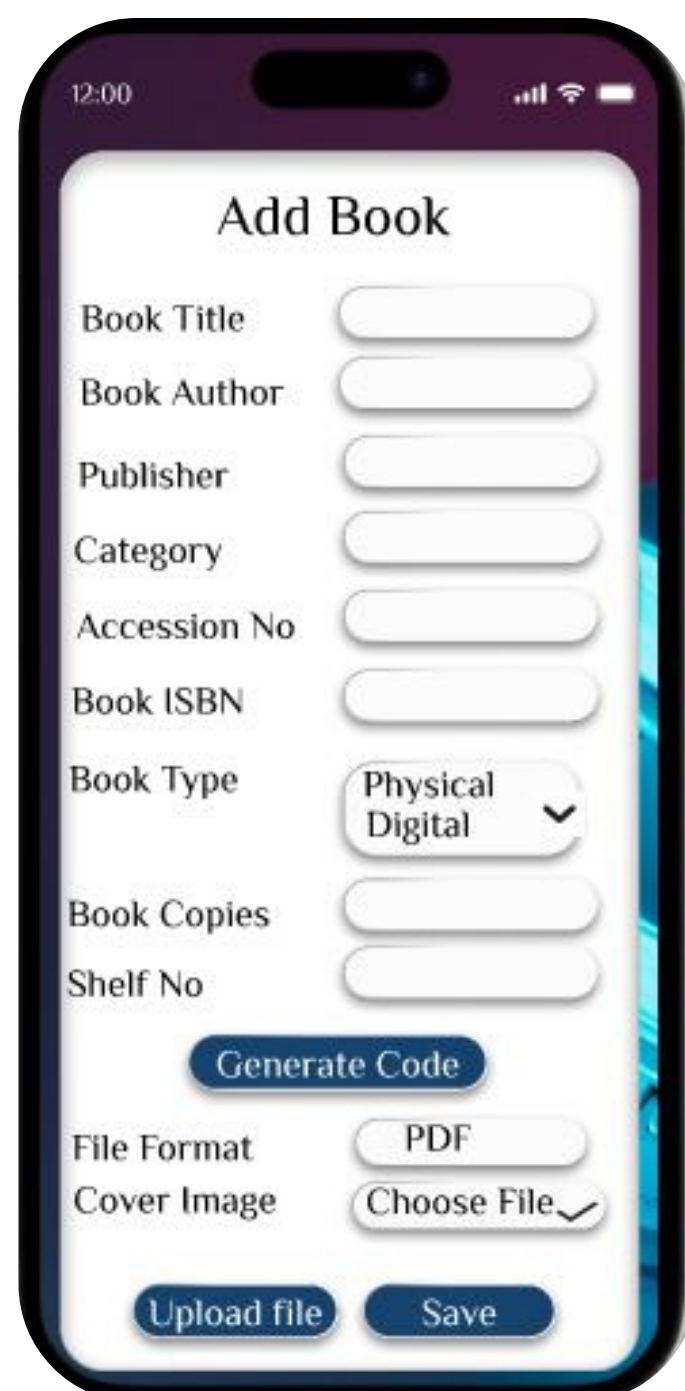

Main Objectives

- Manage physical and digital books easily.
- Access and read digital content like e-books and lesson plans.
- Issue and return books using QR codes.
- Teachers recommend books to students via personal bookshelves.
