Main Idea

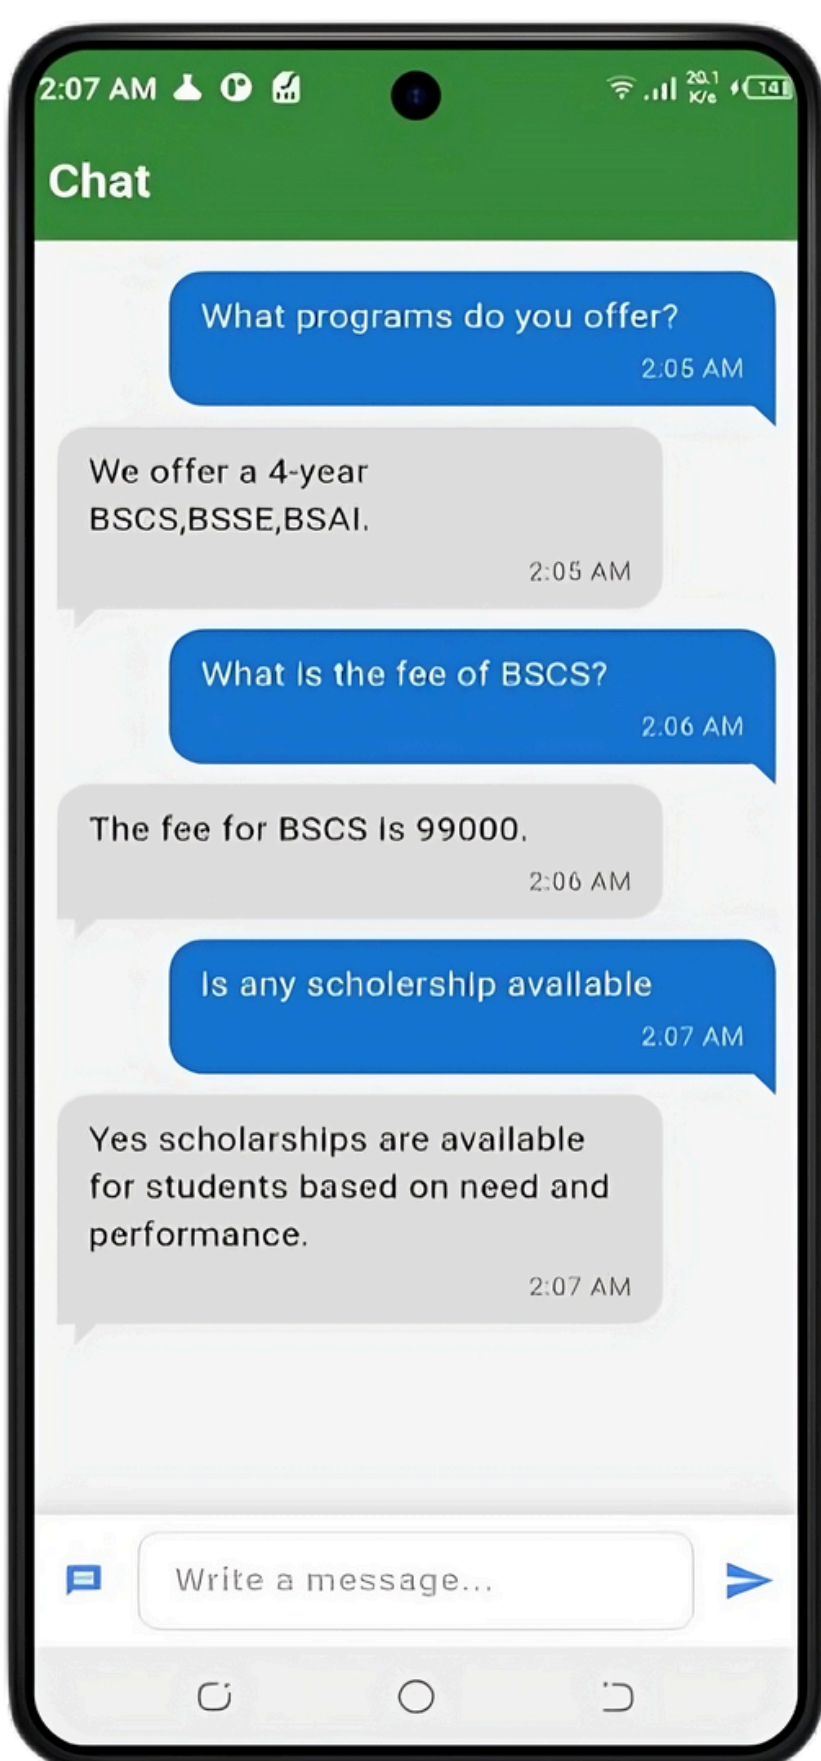

Chatbot using WhatsApp history aims to build an intelligent chatbot that analyzes previous WhatsApp conversations to generate personalized and context-aware responses. By learning from historical chat data, the chatbot delivers more natural and efficient interactions, enhancing customer service through the use of NLP techniques.

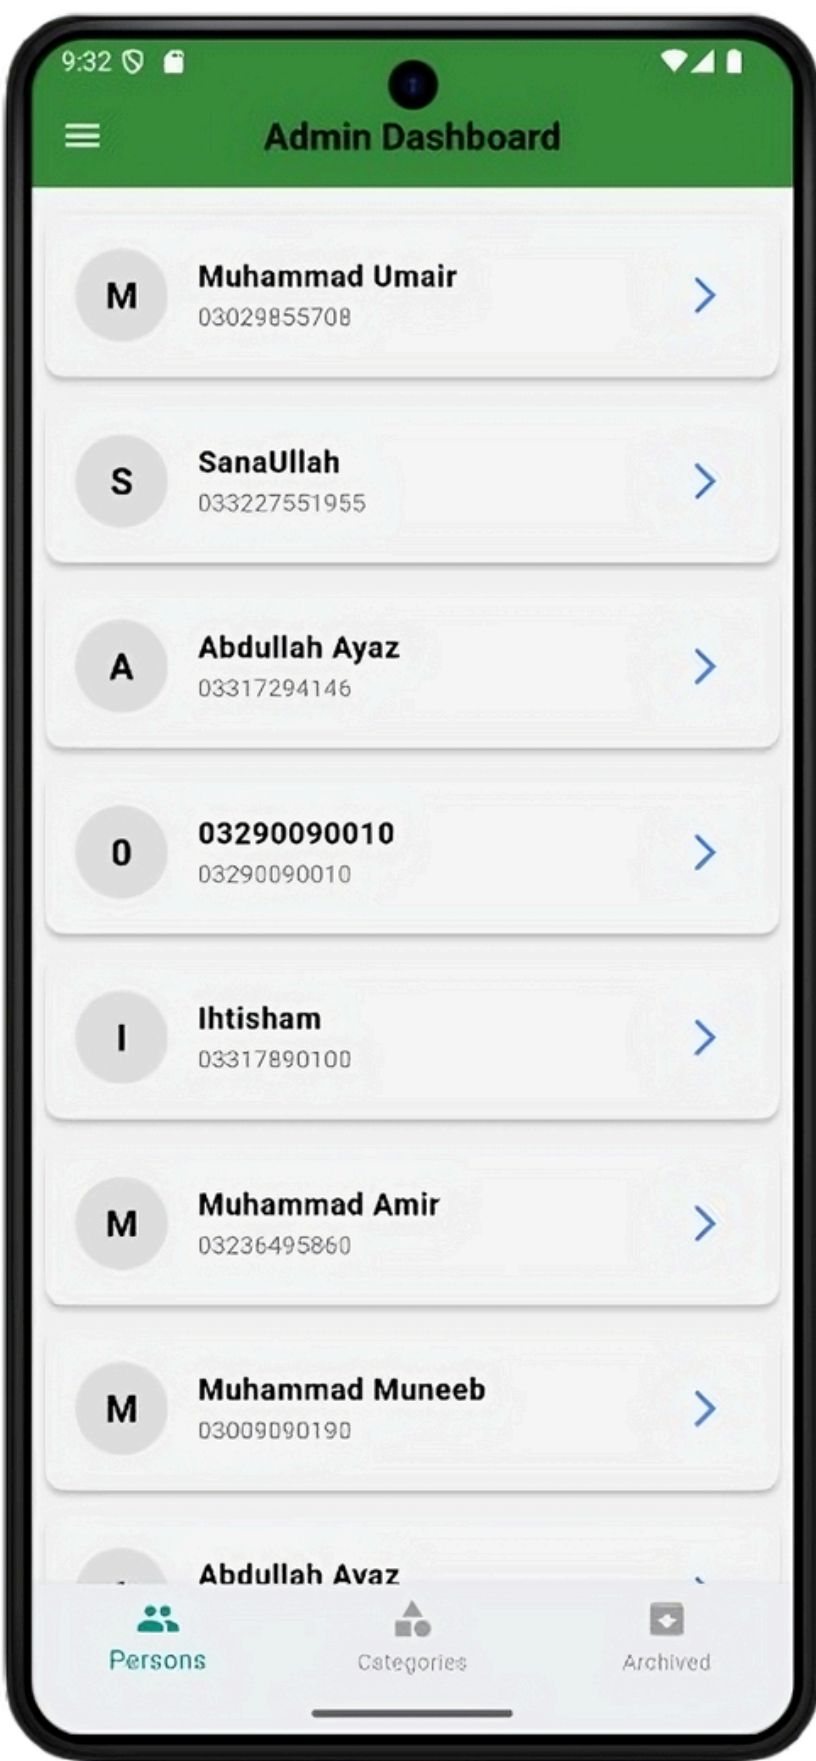

Main Objectives

- The admin can change domain knowledge bases, such as updates about the current semester.
- The system categorizes chats like Fee, Admission etc.
- An intelligent chatbot that interacts with users.
